

Vehicle Control Unit Update

EV9 | 9/04/2024

Dear Owners,

An OTA Update for the Vehicle Control Unit (VCU) will be available from the 9th of April 2024. This update is applicable to all EV9 variants.

What's New

This OTA update provides the following improvement to the i-Pedal operation:

1. In the interest of safety, we've improved the i-Pedal logic to prevent the possibility of the vehicle moving slightly backwards, before accelerating from a stationary position.

* i-Pedal: provides adjustable vehicle acceleration and braking control with single pedal operation.

We hope that this OTA update will enhance your driving experience with added safety.
